

WHY JACK SHUFFLEBOARDS ARE BEST...

1. Our boards start with a better selection of lumber. Instead of maple playfields, we make ours out of beech, which is 11% more rigid and 19% more shock resistant than maple.

All boards are cut, molded, glued, pressed, sanded, inlaid, sealed, and poured right here in our factory.

2. Because beech is so stiff, we were able to reduce the thickness of our playfield from 3" to 2.125" to allow for the proper concavity adjustment and playability of the boards while saving weight.

All the boards are analyzed and sorted prior to glue-up.

3. Double tongue-and-grooves (TNG) for superior torsion strength and to allow for more glue surface between the planks.

2.125" thick boards allow for proper adjustment.

Double tongue & grooved planks provide superior rigidity.

4. Playfields are balance-sealed and topped with a two-part poured polymer resin built to an average of 1/8" thick. The polymer we use resists yellowing and consists of 100% solids for a rock hard playing surface that will last. At first, we poured the polymer 1/4" thick. Then the chemist of the polymer manufacturer told us not to pour anything over 1/8" as a thicker build-up degrades the product.

Approximately 1/8" thick poured polymer resin top resists yellowing.

5. Climate Adjusters (beneath the playfield) are designed for superior fine-tuning and strength. Climate Adjusters keep the playfield slightly concave and under tension for proper play throughout the year. We use a 1/2" diameter all-thread with 20 threads per inch so your installer can fine tune the playability of the board. Each 1/4" thick steel bracket is fastened to the board with 12 2" long screws that go almost all the way through the playfield.

The Climate Adjusters are cut, welded, and powder coated in the USA. Climate Adjusters are incredibly important to the playability of the board. Please compare other manufacturers adjustors against ours.

Double nuts lock in the adjustment of each playfield quickly and easily.

6. As most fine woodworkers know, balancing a piece of wood is extremely important. That means whatever is on one side of the board should be on the other to balance the moisture exchange and keep warping to a minimum. This is no more important than on a shuffleboard playfield.

We use the same two-part poured polymer resin on the bottom of the board as we do the top. Several applications are applied to the bottom to seal and balance the board properly. The polymer costs \$100's of dollars per gallon, but we feel it is worth it in the long run to have an environmentally balanced playfield.

The bottom of our playfields are finished with the same polymer as the top to environmentally balance the board.

7. Custom inlayed logos are available. Decal logos are available for highly detailed logos or logos with color.

8. Perhaps the one detail that separates our shuffleboard tables most in the marketplace is our padded end collars. The decorative yet functional collars protect your cradle from the random flying puck, gives you a perfect handhold when shooting, and looks great. You get to choose from a multitude of colors of vinyls or leathers.

Padded end collars protect your investment.

9. Shuffleboards need a strong foundation to function well. Our heavy duty solid-hardwood construction ensures that the table will not budge or shift or creak under even the most spirited game.

Our cradles are built like furniture meant to stand the test of time. Solid hardwood chassis and corner blocked cross rails with a hardwood veneer plywood cradle bottom. Legs are pre-assembled at the factory and easily mounted with 5/16” bolts into metal inserts for strength. The solid construction is another reason our shuffleboard tables are considered to be the finest you can buy.

10. We line the alleys (area around the playfield) of our shuffleboard tables with 100% polyester microfiber upholstery fabric, not indoor/outdoor carpeting. Microfiber alleys let you pick from a wide range of colors, looks great, and is easier to clean than carpeting.

Easy-to-clean microfiber comes in many colors to choose from.

11. Finally, we offer stylish, original designs that are on-trend, yet feature timeless qualities.

All our shuffleboard tables are available in your choice of finish color, alley and collar upholstery, and are offered in a wide range of sizes.

All our products are made in our factory in California, USA.
